

AI-powered coverage intelligence

PolicyPilot

Turn fragmented insurance policies into searchable, comparable, evidence-backed answers at the point of care.

From coverage confusion to confident next steps

- ✓ **Search**
Find drug coverage across payers in seconds.
- ✓ **Compare**
See prior authorization rules side by side.
- ✓ **Trace**
Ground every answer in source policy evidence.

1-2h

coverage work per provider per day

10+

demo payers and policy sources

50+

target payer expansion roadmap

The Coverage Bottleneck

PolicyPilot converts scattered payer documents into practical decisions providers can use while a patient is still in the room.

Before

- Payer PDFs and formularies live in separate places
- Prior authorization criteria are written differently
- Policy changes are easy to miss
- AI answers are hard to trust without citations

After PolicyPilot

- Unified search for drug coverage across payers
- Normalized criteria for side-by-side comparison
- Version tracking highlights what changed
- Responses link back to source policy evidence

Human-centered payoff

Faster answers

Reduce lookup time during clinical conversations.

Lower risk

Use current policies and visible evidence instead of stale PDFs.

Clearer action

Show what is covered, what needs PA, and what evidence is missing.

How It Works

A policy intelligence pipeline built for documents, structured rules, patient context, and grounded responses.

Coverage Search

Look up drug coverage across plans with visual coverage status.

Policy Chat

Ask natural language questions about PA rules and eligibility.

Evidence Explorer

Search source policy text to verify the exact basis for an answer.

Change Tracking

Monitor policy versions and inspect what changed over time.

Patient Readiness

Compare patient facts against authorization criteria.

Data Management

Upload, parse and manage policy documents in one workspace.

Built for Trust, Speed and Demo Impact

A modern full-stack prototype focused on usable healthcare policy intelligence rather than another static document repository.

Frontend

React, TypeScript, Vite, accessible cream-theme interface

Backend

Node.js, TypeScript, Express services and MCP tooling

AI Layer

Claude-powered policy Q&A, summarization and readiness reasoning

Data

Normalized JSON policies, file storage, version history and evidence links

Why judges should care

- ✓ Relatable pain: providers waste time answering basic coverage questions.
- ✓ Practical workflow: search, compare, verify and act from one workspace.
- ✓ Trust layer: AI responses are grounded in source policy evidence.
- ✓ Scalable path: payer expansion, EHR integration and predictive denial insights.

Bottom line: PolicyPilot makes coverage decisions actionable, accessible and evidence-backed.
